

## Job Description – Senior Web Developer

### Role Description:

The role will primarily focus on website development but also technical architecture, proposal support and process improvements. This individual will work with other web developers to develop new technology offerings, deliver best practise web solutions and support our existing client websites and hosting. One of the websites that they will be heavily involved in developing and supporting is <http://www.trafficengland.com>, a C#.NET highly accessible front-end, with a road network created by complex stored procedures that are stored in a Microsoft SQL Server database along with road events. The right candidate will have a related degree and at least 5 years of industry experience.

**Hours:** Monday – Friday, 8.30am – 5.30pm

### PERSONAL RESPONSIBILITIES:

- Skills and process development to take the team forward
- Proposal support and technology offerings development
- Envisioning and Planning phase technical architecture
- Web development during Producing and Stabilising phases
- Maintenance and support for existing websites and hosting services

### SKILLS/KNOWLEDGE DESIRABLE:

- Expert in C# .NET and Visual Studio
- Expert in Microsoft SQL Server, complex stored procedures and database administration
- Expert in Windows Server, IIS 5/6, hosting, DNS and network configuration
- Experienced with content management solutions, Ektron CMS400.NET, Immediacy, RedDot
- Experienced ASP, VBSCRIPT
- Experienced HTML, DHTML, CSS, Javascript, XML, XSLT
- Useful also mapping technologies, Google Maps and Navteq Map24
- Useful also version control systems, Subversion and SourceSafe
- Useful also Microsoft Shared Services and MOSS 2007

**Personal Situation:** The right candidate will already be based in Bournemouth or the surrounding area, alternatively if they are relocating they **must have strong ties to the area** such as family.
